Project Title: Employee Management System.

Front-end Tool: HTML, CSS.

Back-end Tool: PHP.

ABSTRACT

Employee Management System is a system designed to work on a local server. It includes two types of users : Admin and Employee.

The admins are responsible for constantly updating the system. They manage all the employee records, update user personal details related to work, education, experience and so on. Admin can also update their own profile and change the passwords. On the other hand, employee module allows users to register, login, recover their password, add and update their personal details, update their passwords.
